

## Syllabus: EMA 6581 (Section 091D) – Polymeric Biomaterials – Spring 2017

- 1. Course Description (from the catalog):** Biomedical implant and device applications of synthetic and natural polymers. Biocompatibility and interfacial properties of polymers in physiological environments, especially concerning short-term devices (catheters) and long-term implants (intraocular lenses, vascular and mammary prostheses, etc.). (3 Credit Hours)
- 2. Course Objectives:** To present the fundamental concepts and applications of polymeric biomaterials science and engineering. To describe the structure, properties, and applications of these biomaterials. To understand the enabling impact of correct materials use.
- 3. Prerequisites:** (CHM2045 or CHM2095) and EMA 3066 or equivalents
- 4. Contribution of course to meeting the professional component:** This course provides 3 credits towards engineering sciences.
- 5. Instructor: Dr. Chris Batich**
  - a. Office location: 317 MAE (Materials Bldg.)
  - c. E-mail address: [cbati@ufl.edu](mailto:cbati@ufl.edu)
  - d. Office hours: **by appointment**
- 6. Teaching Assistant: none**
- 7. Meeting Times and Location: T 7 (NPB 1200) – R 7-8 (NPB 1200) (1:55-2:45, and 3:00-3:50 pm)**
- 8. No Textbook Recommended:** We will refer to books and articles available free online for UF students. The third edition of “Science of Biomaterials”, ed. Ratner et al., 2013 will be used to some extent. It is available free as a UF Library download.
- 9. On the Web:** This course will use Canvas as an *archival tool*.
- 10. Conduct, Attendance and Expectations:** Leaving your cell phone on, leaving early or arriving late can be distracting. All electronic devices (PDAs, cell-phones, etc.) should be turned off or in silent mode. While not directly enforced, attendance is strongly suggested since significant amount of participative as well as individual and collaborative work will be performed during the class sessions.
- 11. Grading and Grading Scale:** Your final grade will be allocated based on the following distribution:

**Four In-Class exams: approximately 20% each. One project presentation 10%.  
(some leeway for participation etc.)**

**A** = 90%-100%; **B+** = 85%-89%; **B** = 80%-84%; **C+** = 75%-79%; **C** = 70%-74%; **D+** = 65%-69%; **D** = 60%-64%; **E** < 60%.
- 12. Homework:** Homework exercises may be assigned throughout the course. Homework may not be collected or graded, but can be the basis for test questions.
- 13. Course Outline:** Here is a tentative list of topics: General classes of polymeric biomaterials in current use. Brief review of polymer properties. Vascular grafts, heart valves, dialysis membranes, UHMWPE, catheters, drug delivery devices, tissue adhesives, drug-eluting stents.

## No Final Exam

14. **Honesty Policy** – All students admitted to the University of Florida have signed a statement of academic honesty committing them to be honest in all academic work and understanding that failure to comply with this commitment will result in disciplinary action. This statement is a reminder to uphold your obligation as a UF student and to be honest in all work submitted and exams taken in this course and all others.

15. **Accommodation for Students with Disabilities** – Students Requesting classroom accommodation must first register with the Dean of Students Office. That office will provide the student with documentation that he/she must provide to the course instructor when requesting accommodation.

16. **UF Counseling Services** – Resources are available on-campus for students having personal problems or lacking clear career and academic goals. The resources include:

- University Counseling Center, 301 Peabody Hall, 392-1575, Personal and Career Counseling.
- SHCC mental Health, Student Health Care Center, 392-1171, Personal and Counseling Center for Sexual
- Assault/Abuse Recovery and Education (CARE), Student Health Care Center, 392-1161, sexual assault counseling.
- Career Resource Center, Reitz Union, 392-1601, career development assistance and counseling.

17. **Software Use** – All faculty, staff and student of the University are required and expected to obey the laws and legal agreements governing software use. Failure to do so can lead to monetary damages and/or criminal penalties for the individual violator. Because such violations are also against University policies and rules, disciplinary action will be taken as appropriate. We, the members of the University of Florida community, pledge to uphold ourselves and our peers to the highest standards of honesty and integrity.

18. **Course Premise:** better medical care will result from better use of materials. This can be facilitated if one has a good understanding of the molecular mechanisms involved in the good and bad responses of the material and the patient as they interact.

19. **Specific Class Goal:** to enhance a person's ability to function as a team member developing a new or improved medical device.

20. **Understanding and skills needed for that goal:**

1. Boundary conditions and trends (medical marketplace) e.g. < \$ 50,000/year of life extended.
2. Clinical need. What function needs to be replaced? Requires a reasonable knowledge of medical jargon to communicate well.
3. State-of-the-art. What are current devices, and what are their limitations? Requires knowledge of developmental history (what has been tried, and why has it not worked out?).
4. Mechanisms for limitations. E.g., not “vascular grafts fail” but rather: “vascular grafts have excessive thrombosis complications.”
5. Possible future alternatives. What new science or technology on the horizon will enable new devices? How can you use that science and technology for making better devices?
