Co-requisite: EMA 4120 (Phys. Met I)

Description: Engineering aspects of metals processing. Science and Technology of metal and manufacturing processing. Materials and process selection are also addressed and related to numerous applications for specific ferrous and non-ferrous metals.

Objective: To introduce the student to processing of structural materials and materials selection for structural applications.

Approach: Demonstrate connections between processing, microstructures and properties in metals. Use examples to illustrate effect of processing on microstructures and properties. Use examples of materials process selection for a variety of applications to reinforce subjects.

Contribution of Course to Meeting the Professional Component: This is a 4 credits course. It provides 2 credits towards engineering sciences and 2 credits towards design.

Relationship of Course to Program Outcomes: This course addresses the following MSE Program outcomes (Note: Numbers refer to the list of MSE Program Outcomes)

- 4.) Ability to apply and integrate knowledge of structure, properties, processing, and performance to solve materials selection and design problems within realistic constraints. The problems involve designing/selecting a process to produce a part or a product. The effort includes several steps (but not limited to) defining the product application, materials selection, comparison between different processing options based on the product specifications, material selected, the process parameters, and environmental impact, as well as cost analysis. The course also includes field trips to materials processing facilities in the area. (High Coverage)
- 6.) Ability to identify, formulate and solve engineering problems. The course lectures include examples of various processing technologies and their applications in different practical situations. The project involves identifying the product specifications needed to meet its application requirements. The students select the processing methodology. They ask themselves several questions such as: What is the most appropriate casting process? What is the most appropriate alloy to use in the casting, considering both the performance and the manufacturability (castability and machinability)? Thus, they learn how to formulate the problem and how to solve it. (High coverage)
- 9.) Understanding of the economic impact of engineering solutions.(low coverage) As part of the design project, students are asked to consider economic factors, such as production costs and marketing.

Grading: 1.) Homework given approximately bi-weekly, due within 1 week of assignment. Late homework accepted until solutions handed-out, but penalized 10% per day after due date. All work must be shown for full/partial credit.

2.) Exams: 3 mid-terms tentatively schedule for:  
TBA  
Optional final – Wed., December 11<sup>th</sup>, 12:30-2:30pm  
All work must be shown for full/partial credit.  
Questions require thought/common-sense.

	Without Optional Final	With Optional Final
3 Midterm Exams	25% each	20% each
Bi-weekly Homework	25%	20%
Optional Final Exam	N/A	20%
Total	100%	100%

**Grading Scale: 93-100 A, 90-92 A-, 87-89 B+, 83-87 B, 80-82 B-, 77-79 C+, 73-77 C, 70-72 C-, 67-69 D+, 63-67 D, 60-62 D-, < 60 E**

- 3.) No extra credit accepted.
- 4.) Review sessions before each exam.
- 5.) All grading based on curve.

**For EMA-6625 Only:** All students will be required to complete a 10-15 page paper on Process Metallurgy. The subject should be identified prior to Wednesday, October 30<sup>th</sup> and approved by the instructor. The report, homework, midterms (and optional final, if taken) will all be worth equal amounts of the overall grade. The report will be due on last day of class (December 4<sup>th</sup>). This report will be worth the same amount as a midterm exam.

**For EDGE Students Only:** Due dates for all assignments and tests will be provided. However, in general, all EDGE students should attempt to turn in all assignments within 1 week of in-class due dates. The EDGE students who can not meet these due dates, should contact the professor immediately and establish an appropriate due date.

**Honesty Policy:** All students admitted to the University of Florida have signed a statement of academic honesty committing themselves to be honest in all academic work and understanding that failure to comply with this commitment will result in disciplinary action. This statement is a reminder to uphold your obligation as a UF student and to be honest in all work submitted and exams taken in this course and all others.

**Accommodation for Students with Disabilities:** Students Requesting classroom accommodation must first register with the Dean of Students Office. That office will provide the student with documentation that he/she must provide to the course instructor when requesting accommodation.

**UF Counseling Services:** Resources are available on-campus for students having personal problems or lacking clear career and academic goals. The resources include:

- University Counseling Center, 301 Peabody Hall, 392-1575, Personal and Career Counseling.
- SHCC mental Health, Student Health Care Center, 392-1171, Personal and Counseling.

Center for Sexual Assault/Abuse Recovery and Education (CARE), Student Health Care Center, 392-1161, sexual assault counseling.  
Career Resource Center, Reitz Union, 392-1601, career development assistance and counseling.

Software Use: All faculty, staff and student of the University are required and expected to obey the laws and legal agreements governing software use. Failure to do so can lead to monetary damages and/or criminal penalties for the individual violator. Because such violations are also against University policies and rules, disciplinary action will be taken as appropriate. We, the members of the University of Florida community, pledge to uphold ourselves and our peers to the highest standards of honesty and integrity.

## **Subjects to be Covered:**

- 1.) Introduction to Manufacturing Processes
  - a. Discussion inter-relationship of materials and processing with manufacturing
  - b. Introduce materials selection criterion
  - c. Introduce materials process selection criterion
- 2.) Properties of Metals and Alloys
  - a. Briefly discuss important physical and mechanical properties of metals and alloys.
  - b. Crystal structure
  - c. Grains and grain boundaries
  - d. Deformation, recovery, recrystallization and grain growth.
  - e. Examples of structural alloys (e.g., ferrous, non-ferrous, refractory metals, superalloys).
- 3.) Surfaces
  - a. Introduce surface finish, wear and lubrication
  - b. Surface finish measurement
  - c. Wear
  - d. Lubrication
- 4.) Casting Processes
  - a. Introduce solidification processing of metals and alloys
  - b. Solidification
  - c. Melting of engineering alloys
  - d. Casting of ingot and shapes
  - e. Common casting techniques (e.g., mold, centrifugal, squeeze, etc)
  - f. Advanced casting techniques (e.g., directional solidification, etc)
- 5.) Wrought Processing
  - a. Discuss deformation processing and it's effect(s) on microstructures and properties
  - b. Forging
  - c. Rolling
  - d. Extrusion
  - e. Drawing and swaging
  - f. Sheet fabrication
- 6.) Powder metallurgy processes
  - a. Discuss design criterion, limitations and advantages of P/M processing
  - b. Powder making techniques
  - c. Consolidation
  - d. Hot working and fabrication
  - e. Near-net and net-shape processing
- 7.) Coatings
  - a. Discuss coatings for improved surface properties
  - b. Wear resistance
  - c. Environmental resistance
- 8.) Hybrid processes
  - a. Spray forming

- b. Composites
- 9.) Joining
  - a. Introduce welding, fastening and other methods of joining
- 10.) Modeling of processes
  - a. Deform
  - b. Procast
  - c. ThermoCalc
- 11.) Manufacturing Economics
  - a. Examine the economics of materials and process selection for industrial application
  - b. Cost of materials
  - c. Cost of processing
  - d. Selection criterion

### Tentative Schedule

Week #	Week of:	Monday	Wednesday	Friday	Chapter
1	8/19	No Class			1 & 2
2	8/26				2
3	9/2	<i>Holiday</i>			3
4	9/9				4 & 5
5	9/16				5
6	9/23		<b>Midterm #1</b>		5
7	9/30				5 & 6
8	10/7				6
9	10/14				7
10	10/21		<b>Midterm #2</b>		7
11	10/28				11
12	11/4			<i>Homecoming</i>	11
13	11/11	<i>Holiday</i>			
14	11/18				
15	11/25		<i>Holiday</i>	<i>Holiday</i>	15
16	12/2	<b>Midterm #3</b>		<i>Reading day</i>	16
17	12/9		Final Exam 12:30-2:30pm
